

C1
Conced

invoking a transportation decision system to select one of the plurality of travel options and one of the secondary modes of ground transportation based on the recommended travel options and the recommended secondary ground transportation; determining whether an overnight stay is required; invoking a hotel decision support system to select a hotel when it is determined that an overnight stay is required; and invoking an activity and restaurant decision support system to select activities and restaurants in a vicinity of the destination location.

59. (Amended) A memory for access by a computational entity being executed by a processor including:

a travel goal subsystem for receiving a travel goal including a destination location and appointment time;

a transportation subsystem having instructions to select modes and times of transportation based on the travel goal;

a hotel subsystem having instructions to select hotels in a vicinity of a destination site;

activity and restaurant subsystem having instructions to select activities or restaurants near a destination site; and

ground transportation subsystem having instructions to select ground transportation to a destination site.
